```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                   augment or replace cells damaged by illness, accidental damage or genetic disorders. The sequences may also be used for regeneration of bone, cartilage, tendons and ligaments and in tissue repair and burn healing. Note: Some sequences for this patent did not form part of the printed specification, but were obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                   chorea, amyotrophic lateral sclerosis, spinal muscular atrophy and Wernicke disease, inflammatory disorders such as nephritis, Crohn's disease, ischaemia reperfusion injury, shock, sepais and inflammatory bowel disease. The sequences exhibit activity relating to angiogenesis, cell proliferation, cell differentiation, stem cell growth factor, activin or inhibin. Therefore, they can be used to manipulate stem cells in culture to give rise to neuroepithelial cells that can be used to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence is one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. No ORF has yet been conclusively identified within the present sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA clibraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used to obtain full tength cDNAs and penomic DNAs. 5' ESTs are also used to obtain full tength cDNAs and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design
                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to human polynucleotides (AAI79941-AAI93841) and the encoded proteins (AAO00010-AAO13910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 1; SEQ ID NO 5195; 1399pp + Sequence Listing; English.

chores, anyotrophic lateral sclerosis, spinal muscular atrophy and disease, inflammatory disorders such as nephritis, Crohn's disease, ischaemia-reperfusion injury, shock, sepsis and inflammatory bowel disease. The sequences exhibit activity relating to angiogenesis, cell proliferation, cell differentiation, stem cell growth factor, activin or inhibin. Therefore, they can be used to manipulate stem cells in culture to give rise to neuroepithelial cells that can be used to augment or replace cells damaged by illness, accidental damage or genetic disorders. The sequences may also be used for regeneration of bone, cartilage, tendons and ligaments and in tissue repair and burn healing.
                                                                                                                                                                                               diabetes mellitus, allergic rhinitis, asthma and eczema, nervous system disorders such as Parkinson's disease, Alzheimer's disease, Huntington's

```

The invention relates to the diagnosis of spinocerebellar ataxia type III (SCAIII) syndrome using reverse dot hybridisation or PCR-microplate hybridisation (PCR-MPH). The method comprises attaching a potion of the SCAIII gene containing 73 copies of the trinucleotide (CAG) repeat unit (the present sequence) to a substrate, and hybridising with amplified testee genomic DNA containing copies of the trinucleotide units, PCR

The new method is useful for diagnosis of SCAIII syndrome, and for determining the severity of the disease. The present sequence represents the SCAIII gene fragment containing 73 trinucleotide (TNR) repeats.

The invention relates to a microsatellite marker located on human Norman Stromosome 5q31-33 between markers D5S402 and WI-6763, comprising a comprising spinocerebellar ataxia 12 (SCA12) by determining the number of CC GAG trinucleotide repeats in a 5'-untranslated region of an allele of PP2RBbeta, a brain specific regulatory subunit of protein phosphatase CC PP2RW where if a number greater than 40 is determined, an expansion which CC is associated with SCA12 is indicated. The presence of expanded curinucleotide repeats on chromosome 5q31-33 is useful for amplifying the CC diagnosing SCA12. Also provided are primers useful for amplifying the CC microsatellite marker associated with SCA12 and for diagnosing SCA12 and compressed the contested on human chromosome 5q31-33. The present sequence represents CC a PP2RZB DNA sequence
Sequence 5120 BP; 1336 A; 1267 C; 1268 G; 1249 T; 0 other;
                                                        a PPP2R2B DNA sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New polynucleotide for use in diagnosing spinocerebellar ataxia 12, comprises a microsatellite marker having a variable number of CAG trinucleotide repeats located on human chromosome 5q31-33 -

The SCA8 coding sequence contains polymorphic CTA repeats and CTG repeats. Generally, the CTA repeat is unstable, and can vary between individuals in different families (the number of CTA repeats in the region does not
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 25; Fig 7C; 68pp; English.

Fragments of the nucleic acid molecule are useful as primers and probes for determining whether an individual as primers and probes for determining whether an individual as primers and probes for determining whether an individual as primers and probes for determining whether an individual as primers and probes for determining whether an individual as primers and probes for determining whether an individual as primers and probes for determining whether an individual as primers and probes for determining whether an individual as primers and probes for determining whether an individual as primers are probes.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              in different families (the number of CTA repeats in the region does not vary between individuals of a family). Fragments of the nucleic acid molecule are useful as primers and probes for determining whether an individual has or is at risk of developing spinocerebellar ataxia 8.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            repeat region of a spinocerebellar ataxia type 8 (SCA8) coding sequence which is located within the long arm of chromosome 13. The SCA8 coding sequence contains polymorphic CTA repeats and CTG repeats. Generally, the CTA repeat is unstable, and can vary between individuals
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel nucleic acid molecule containing repeat region of spinocerebellar ataxia type 8 coding sequence, useful as primer or probe for diagnosing or determining risk for developing spinocerebellar ataxia -

It is within CAG repeat region (AAQ84804) that the mutations responsible for SCA 1 OCCUI. The full nucleic acid (AAQ84793) and its protein product (AAR71111) can be used to develop products, for the presymptomatic detection of a SCA 1 disorder.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                        repeats, where individuals at risk have at least 30 CAG repeats and those not at risk have less than 19 CAG repeats. The method is useful for identifying individuals at risk of developing SCA7 and also those at risk of developing SCA1, 2, 3 or 6. The use of genomic DNA in the repeat expansion detection (RED) analysis allows isolation of any potential trinucleotide repeat expansion regardless of the expression pattern. Utilization of different oligonucleotides in the RED assay allows any of the possible trinucleotide repeats to be detected, and the cycled nature of the reaction makes it extremely sensitive. This sequence represents a genomic DNA fragment of the human SCA7 gene which is described in the method of the invention.
                                                                                                                                                                                                                                                                    1477 cagcagcagcagcagcagcagcagcagcacccggttttacaccttcagccccag 1536

CC -1- SUBSCITION STATION BY MICHAEL CCC. THE FUNCTION: IT IS INVOLVED IN REPRESSION BY A1-ALPHA2 AND ALPHA2 AND CC IN OTHER SYSTEMS AS A GENERAL REPRESSOR OF TRANSCRIPTION. THIS CC PROTEIN HAS NO OBVIOUS DNA-BINDING DOMAINS. IT MIGHT NOT INTERACT CC OLIRECTLY WITH DNA BOT WITH DNA-BOUND PROTEINS. CC -1- SUBSCILUTIAR ICAGATION.	RP TPR REPEATS.                                                                                                                                                                                                       I- FUNCTION: ESSENTIAL FOR DIFFERENTIATION AND FRUIT MORPHOGENESIS.

1- CATALYTIC ACTIVITY: ATP + a protein - ADP + a phosphoprotein.

1- SUBUNIT: IN DICTYOSTELIUM THE HOLDENZYME IS A DIMER COMPOSED OF A REGULATORY (R) AND A CATALYTIC (C) SUBUNIT. IN THE PRESENCE OF CAMP IT DISSOCIATES INTO THE ACTIVE C SUBUNIT AND AN R MONOMER.

1- DEVELOPMENTAL STAGE: CAPK ACTIVITY IS LOW IN VEGETATIVELY GROWING
                                                                                                                                                                                                                                                                                                                                               Mann S.K.O., Yonemoto W.M., Taylor S.S., Firtel R.A.; "DdPK3, which plays essential roles during Dictyostelium development, encodes the catalytic subunit of cAMP-dependent protein kinase."; Proc. Natl. Acad. Sci. U.S.A. 89:10701-10705(1992).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1709

seq_documentation_block:
stripe a/D protein - fruit fly (Drosophila melanogaster)
C:Species: Drosophila melanogaster
C:Date: 28-oct-1996 #sequence_revision 13-Mar-1997 #text_change 21-Jul-2000
C:Accession: S69205
R:Frommer, G.; Vorbrueggen, G.; Pasca, G.; Jaeckle, H.; Volk, T.
EMBO J. 15, 1642-1649, 1996
A:Title: Epidermal egr-like zinc finger protein of Drosophila participates in myotube
A:Reference number: S69205; MUID:96203082
A:Accession: S69205
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              alignment_block:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          A;Status: preliminary; nucleic acid sequence not shown
